CALIFORNIA AGRICULTURAL  
STATISTICS SERVICE

## WALNUT PRODUCTION FORECAST UP

The 2003 California walnut production is forecast at a record 315,000 tons, up 12 percent from 2002's production of 282,000 tons. This forecast is based on the 2003 Walnut Objective Measurement (O.M.) Survey, which was conducted August 1 through August 25, 2003.

The 2003 Walnut O.M. Survey utilized a total of 686 blocks with two sample trees per block. Survey data indicated an average nut set of 1,599, up 2 percent from 2002's average of 1,572. The Hartley nut set was down 12 percent; Chandler, was up 21 percent; Serr, was up 33 percent; Franquette, was down 42 percent from 2002. Percent of sound kernels in-shell was 97.0 percent Statewide. In-shell weight per nut was 22.4 grams, while the average in-shell suture measurement was 32.5 millimeters. The average length in-shell was 39.1 millimeters.

Estimated nut sets, sizing measurements, average number of trees per acre, and estimated bearing acreage were used in the regression formulas.

## SURVEY HISTORY

The Walnut O.M. Survey began in 1958 to fulfill industry needs for an accurate walnut production forecast prior to harvest. The original sample was chosen proportionally to county and variety of bearing acreage. With each succeeding year, additions and deletions have been made in the sample to adjust for acreage removed, new bearing acreage and operations that choose not to participate in the O.M. survey.

## SAMPLING PROCEDURES

Once a block is randomly selected and permission is granted by the operation for enumerators to enter the block, two trees are randomly selected. An accessible branch is chosen, which is 5-15 percent of the total cross-sectional area of the primary limbs and reachable with a twelve-foot ladder. Measurements are made on the trunk, each primary, and each split leading to and including the accessible branch. The sample tree and accessible branch are marked by a single tag.

On the accessible branch, every first of five nuts is picked for use in size and grade determinations. If available, at least ten nuts are harvested from the accessible branch for this purpose.

The following measurements are made on nuts selected for sizing:

1. Weight of nut including hull.
2. Width of shell at suture.
3. Width of shell 90 degrees to suture line (cross-suture).
4. Length of shell.
5. Kernel grade.
6. Weight of nut in-shell.

## DATA RELIABILITY

The 80 percent confidence interval is from 285,000 tons to 345,000 tons. This means there is an 80 percent chance the 2003 production will fall within this range.

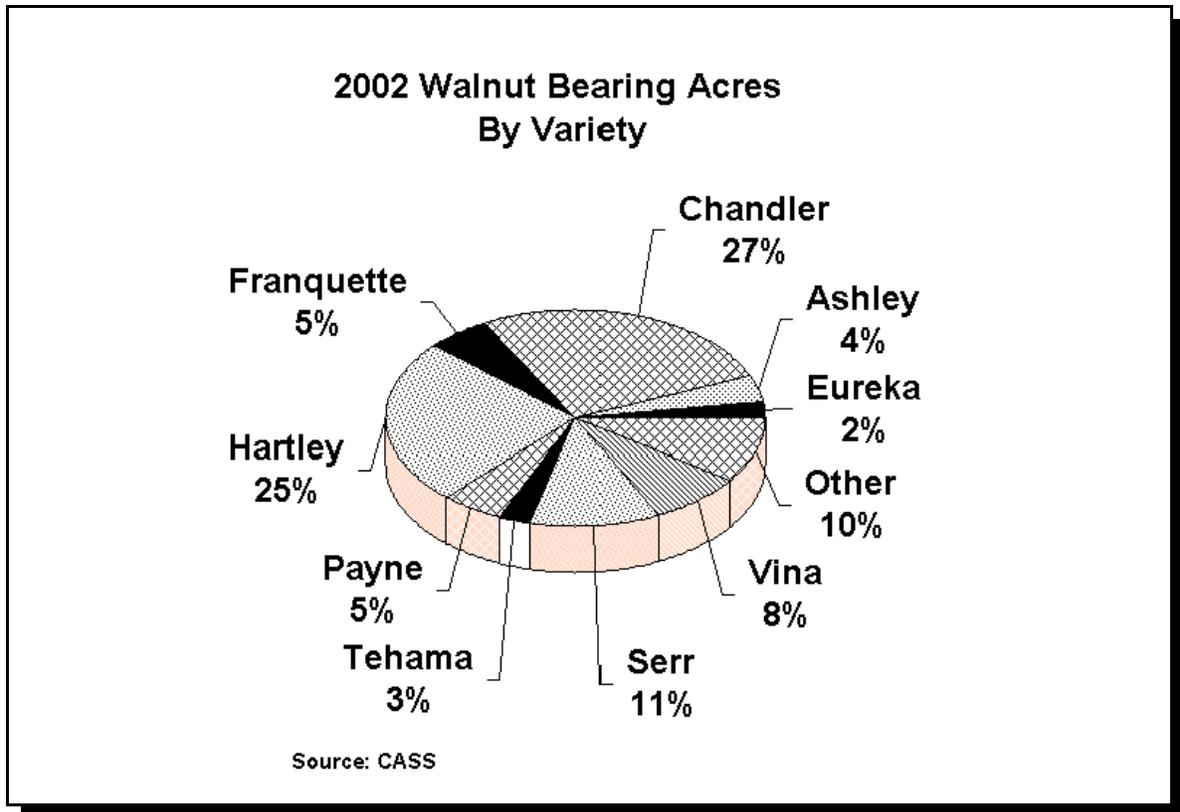

**California English Walnut Acreage, Production, Price And Value In-Shell**

Year	Bearing Acres	Total Production	Per Bearing Acre	Price Per Ton	Total Value
		Tons		Dollars	
1987	176,000	247,000	1.40	984.00	243,048,000
1988	177,000	209,000	1.18	922.00	192,698,000
1989	179,000	229,000	1.28	1,070.00	245,030,000

1994	189,000	232,000	1.23	1,030.00	238,960,000
1995	193,000	234,000	1.21	1,400.00	327,600,000
1996	192,000	208,000	1.08	1,580.00	328,640,000
1997	193,000	269,000	1.39	1,430.00	384,670,000
1998	193,000	227,000	1.18	1,050.00	238,350,000
1999	191,000	283,000	1.48	886.00	250,738,000
2000	193,000	239,000	1.24	1,240.00	296,360,000
2001	196,000	305,000	1.56	1,120.00	341,600,000
2002 <sup>a/</sup>	200,000	282,000	1.41	1,080.00	304,560,000
2003 <sup>b/ c/</sup>	205,000	315,000	1.54	---	---

<sup>a/</sup> Price Per Ton and Total Value are July 1, 2003 preliminary data.

<sup>b/</sup> Bearing years include plantings of the following: Chandler, Chico, Howard, Tulare (1999 & Earlier); 50-55, 59-124, 4946, Amigo, Ashley, Bardoni, Cisco, Earhorn, Grove, Gustine, Honeycutt, Houston, Jensen, Lompoc, Marchetti, Nuggett, Payne, Pedro, Serr, Sunland, Tehama, Trinta, UCD 67-13, Vina, Westside (1998 and Earlier); Franquette, Franquette Scharsch, Mayette, Placentia, Poe, Willsons/Willsons Wonder, Woodland (1996 & Earlier); all other varieties not specified (1997 & Earlier).

<sup>c/</sup> Price Per Ton and Total Value preliminary data will be released July 2004.

**NOTE:** Pie chart percentages are based on the sum of grower acreage reported and may not add to 100 due to rounding.

**Walnut Objective Measurement Survey Data, By District**

<sup>1/</sup> Coast includes: Contra Costa, Lake, Monterey, Napa, San Benito, San Luis Obispo, Santa Clara, and Sonoma counties.

<sup>2/</sup> Sacramento Valley includes: Butte, Colusa, El Dorado, Glenn, Sacramento, Solano, Sutter, Tehama, Yolo, and Yuba counties.

<sup>3/</sup> San Joaquin Valley includes: Fresno, Kern, Kings, Madera, Merced, San Joaquin, Stanislaus, and Tulare counties.

<sup>4/</sup> District and State averages are derived by weighting county averages by county bearing acreage figures.
